AC&F ARCHBAR TRUCKS

The prototype for this archbar truck was built by American Car and Foundry and is in the collection at the Illinois Railway Museum. This truck has a 5'-6" wheelbase and is suitable for 40 and 50 ton capacity freight cars.

Our trucks feature one-piece black acetal plastic moldings with separate brake shoe detail, and non-magnetic, insulated metal RP-25 contour wheelsets. Trucks are also available with "semi-scale" (.088" wide) wheels.
